Neoliberal globalization is in deep crisis. This crisis is manifested on a global scale and embodies a number of fundamental contradictions, a central one of which is the global rise of authoritarianism and fascism. This emergent form of authoritarianism is a right-wing reaction to the problems generated by globalization supported and funded by some of the largest and most powerful corporations in their assault against social movements on the left to prevent the emergence of socialism against global capitalism. As the crisis of neoliberal global capitalism unfolds, and as we move to the brink of another economic crisis and the threat of war, global capitalism is once again resorting to authoritarianism and fascism to maintain its power. This book addresses this vital question in comparative-historical perspective and provides a series of case studies around the world that serve as a warning against the impending rise of fascism in the 21st century.

In the fall of 1930, David Packard left his hometown of Pueblo, Colorado, to enroll at Stanford University, where he befriended another freshman, Bill Hewlett. After graduation, Hewlett and Packard decided to throw their lots in together. They tossed a coin to decide whose name should go first on the notice of incorporation, then cast about in search of products to sell. Today, the one-car garage in Palo Alto that housed their first workshop is a California historic landmark: the birthplace of Silicon Valley. And Hewlett-Packard has produced thousands of innovative products for millions of customers throughout the world. Their little company employs 98,400 people and boasts constantly increasing sales that reached \$25 billion in 1994. While there

are many successful companies, there is only one Hewlett-Packard, because from the very beginning, Hewlett and Packard had a way of doing things that was contrary to the prevailing management strategies. In defining the objectives for their company, Packard and Hewlett wanted more than profits, revenue growth and a constant stream of new, happy customers. Hewlett-Packard's success owes a great deal to many factors, including openness to change, an unrelenting will to win, the virtue of sustained hard work and a company-wide commitment to community involvement. As a result, HP now is universally acclaimed as the world's most admired technology company; its wildly successful approach to business has been immortalized as The HP Way. In this book, David Packard tells the simple yet extraordinary story of his life's work and of the truly exceptional company that he and Bill Hewlett started in a garage 55 years ago.

This publication traces the corporate path to power and influence in the modern world, and explores whether corporations of the future will become superpowers in their own right or, like the dinosaurs, give way to superior forms. It examines how the emergence of empire-building firms in 16th century Europe gave way to the dominance of American corporations in the 19th and 20th centuries, which is now under threat as new types of corporations arise in China and elsewhere. The book offers surprising insights, such as why the explorer Sebastian Cabot incorporated while Christopher Columbus did not, how the US Constitution's silence on corporations gave rise to America's industrial dominance, and how a 19th century company making matches emerged as the Amazon of its day only to later lose its technological edge. It also discusses the many ways in which societies attempt to reign in corporate power, and the strategies of corporations to bypass controls. The text, furthermore, considers the startling ways in which new social movements, emerging business models and developing technologies—from bitcoin to artificial intelligence—will shape the corporations of

the future. This book will introduce readers to the legal concept of a corporation, along with the economic and societal factors that gave rise to it as the primary means of conducting business in the modern world. With its broad sweep of history, current relevance, and insightful look to the future, this text will appeal to both scholarly and general audiences.

Why has an economy that has done so many things right failed to grow fast? Under-Rewarded Efforts traces Mexico's disappointing growth to flawed microeconomic policies that have suppressed productivity growth and nullified the expected benefits of the country's reform efforts. Fast growth will not occur doing more of the same or focusing on issues that may be key bottlenecks to productivity growth elsewhere, but not in Mexico. It will only result from inclusive institutions that effectively protect workers against risks, redistribute towards those in need, and simultaneously align entrepreneurs' and workers' incentives to raise productivity.
